

Figures to know about the 2024 Lung Cancer French database

Selection criteria

Selection period: 2015-2023

Database extracted in 2024

Data collected from patient medical files

Quality control processes and yearly updates

- Female or male patients
- ≥18 years old
- who received a first treatment (systemic or radiotherapy) for lung cancer or diagnosed with metastatic lung cancer at one of the 38 participating French medical centers

61 139 patients in the database

Median follow-up

Calculated from advanced or metastatic NSCLC diagnosis, according to reverse Kaplan-Meier method

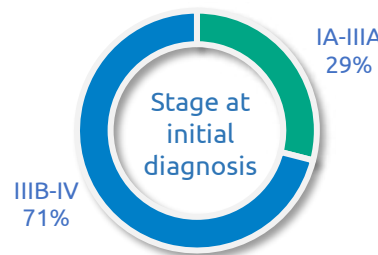

58.0 months

Minimum estimated follow-up

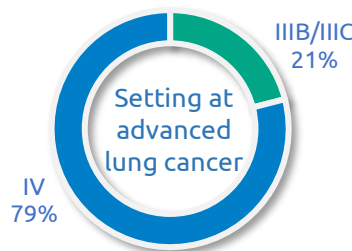

24 months for **45 713** pts

36 months for **38 747** pts

♂ **39 930** ♀ **21 209**

Median age at **initial diagnosis**
66 years

54 420 patients with **advanced or metastatic** lung cancer

6 738 patients with **SCLC**

49 848 patients with **NSCLC**

45 232

patients with **advanced or metastatic NSCLC**

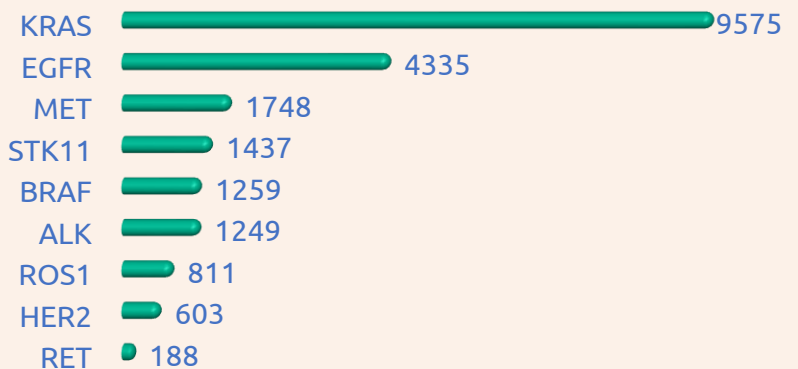

37 355

patients with advanced or metastatic NSCLC who received a **first line of treatment**

10 204

patients with **unresectable stage III NSCLC**

18 370 patients with **oncogenic drivers**

PD-L1 screening performed in **31 136** pts

TPS ≥1% in **18 966** patients

TPS ≥50% in **9 097** patients
